Re: Edison Road Industrial Park Water & Sewer Phase I

Dear Ross,

At your request, we have prepared the following fee proposal for Engineer of Record Services for the Edison Road Industrial Park Water & Sewer Phase I located in the City of Maricopa. This fee covers the construction observations and submittals to ADEQ for the Approval of Construction and the Request for Discharge Authorization.

Engineer of Record Services for the
Edison Road Water & Sewer Lines Phase I..... \$ 8,930

- * Our proposal includes the necessary construction observations to prepare and submit the required forms, documentation, as-built plans and the Engineer's Certificate of Completion that is required by Global Water and by ADEQ to obtain the necessary ADEQ Approvals of Construction.
- * It is our understanding that Global Water will perform their own direct inspection of the water and sewer construction and will address their concerns directly with the contractor and the City of Maricopa.
- * This fee is based upon the requirements listed in the ADEQ Water Quality Division – Engineering Review Section Form 222.
- * This proposal includes 3 trips for construction observation of the water and sewer line installation to verify that it is being performed per the approved plans and specification. This is a visual observation only – not inspection. This does not include any backfill, compaction or pavement replacement verification.
- * This proposal includes 1 trip for observation of water line pressure tests.
- * This proposal includes 3 trips for observation of water line sampling and disinfection testing.

- * This proposal includes 4 trips for observation of the sewer deflection test, pressure test, uniform slope test and the manhole vacuum test.
- * Any additional trips needed in addition to the trips already specified would be an extra charge.
- * Bacteriological sampling and testing data is needed for the AOC submittal and would need to be provided by others.
- * Verification of water and sewer line completeness is to be done via as-built plans that are also needed for the AOC submittal. A set of detailed, measured as-built plans suitable for submittal to ADEQ would need to be provided to us by others.

If you have any questions or concerns, please feel free to call me at your convenience.

Sincerely,

A handwritten signature in black ink that reads "Elijah E. Williams". The signature is written in a cursive style with a long horizontal flourish at the end.
