Executive Summary

Background

The City of Maricopa engaged Segal Waters Consulting to conduct a review of the market competitiveness of its current base pay practices for 60 classifications. To gather market data on actual base pay and salary ranges for all positions, Segal Waters, in consultation with the City of Maricopa Human Resources Department, designed a customized survey to distribute to the peer organizations.

Further details regarding the competitiveness of base pay is provided in **Appendix B**, which contains detailed data associated with each benchmark job and peer employer.

Methodology

Data Sources

This report includes data collected from the nine (9) peer employers listed in Table 2.

As shown in **Table 5**, In terms of population, the City of Maricopa is smaller than four (4) peer employers, is larger than three (3) peer employers and approximately equal to two (2) peer employers.

Data Adjustments

Geographic Adjustments

To adjust for geographic differences in the cost-of-labor between the peer locations and Maricopa, Arizona, Segal used the cost-of-labor differentials reported by the Economic Research Institute (ERI) as of April 2017 for the 25-mile radius around each city.

It is important to note that the cost-of-labor differentials do not necessarily reflect cost-of-living differences. ERI has found that cost-of-living differences (which reflect the supply and demand for goods and services) are not a good predictor of salary levels. In other words, while the cost of housing (or other goods and services) in Maricopa may differ from the cost of housing in another city by a certain percentage, the prevailing salaries may not differ by the same percentage. ERI emphasizes that – for adjusting salaries in a market study such as this one – the cost-of-labor differentials provide a more accurate method of determining whether employers are paying a competitive wage appropriate to a given geographic area.

The geographic adjustments we applied are in **Table 6**. A **negative** adjustment means that the cost-of-labor in a city where a comparator is located is higher than in Maricopa, Arizona. For example, the cost-of-labor Avondale, Arizona is 0.83% higher than in Maricopa. Conversely, a **positive** adjustment would mean that the cost-of-labor in a comparator city is lower than in Maricopa. For example, the cost-of-labor in Oro Valley, Arizona is 5.14% lower than in Maricopa.

TABLE 6
COST OF LABOR GEOGRAPHIC ADJUSTMENTS

Peer Employer	Location (25 mile radius)	Geographic Adjustment
City of Apache Junction, AZ	City of Apache Junction, AZ	0.42%
City of Avondale, AZ	City of Avondale, AZ	-0.83%
City of Buckeye, AZ	Town of Buckeye, AZ	-0.52%
City of Casa Grande, AZ	City of Casa Grande, AZ	0.84%
City of Chandler, AZ	City of Chandler, AZ	-0.72%
City of Goodyear, AZ	City of Goodyear, AZ	-0.52%
Pinal County, AZ	Pinal County, AZ	-0.83%
Town of Oro Valley, AZ	City of Oro Valley, AZ	5.14%
Town of Queen Creek, AZ	City of Queen Creek, AZ	-0.21%

Workweek Adjustments

No workweek adjustments were required for non-exempt jobs, as all peer cities have the same regular hours per week for both general and Fire positions, as the City of Maricopa.

Study Findings

Pay Ranges

Overall, we found the City's pay ranges are market competitive at the pay range minimum and pay range midpoint, but lag at the pay range maximum. However, the City's market position varies by benchmark job, as shown in **Table 7**.
